Question #	ID		Answer
2.1	707db2d3	For the finale of a TV show, viewers could use either social media or a text message to vote for their favorite of two contestants. The contestant receiving more than 50% of the vote won. An estimated 10% of the viewers voted, and 30% of the votes were cast on social media. Contestant 2 earned 70% of the votes cast using social media and 40% of the votes cast using a text message. Based on this information, which of the following is an accurate conclusion? A. If all viewers had voted, Contestant 2 would have won. B. Viewers voting by social media were likely to be younger than viewers voting by text message. C. If all viewers who voted had voted by social media instead of by text message, Contestant 2 would have won. D. Viewers voting by social media were more likely to prefer Contestant 2 than were viewers voting by text message.	D
2.2	63573fea	During the first month of sales, a company sold 1,300,000 units of a certain type of smartphone. During the same month, 15% of the units sold were returned. If sales and the return rate remain the same for each of the next 5 months, about how many units of this smartphone will be returned to the company during this 6-month period? A. 195,000 B. 975,000 C. 1,170,000 D. 6,630,000	C
2.3	8a714fa1	Which of the following represents the result of increasing the quantity x by 9%, where $x > 0$? A. $1.09x$ B. $0.09x$ C. $x + 9$ D. $x + 0.09$	A
